ANNEX

I. Curricular Plan

INTRODUCTION

The present document comprises the San Germán Campus' Nursing Student Information Handbook. Its purpose for the student is to be a source of information about the program, the academic standards, and what the faculty considers to be appropriate behavior for the nursing student. This document is aligned with the Catalog and the General Student Regulations. It comprises the nursing student's responsibilities and rights at the program level.

In its first part, a summary that gathers academic information is presented. It includes the mission, philosophy, conceptual framework, program goals and competencies; major's course descriptions; program requirements; curriculum sequence; student support services; and the ways in which student performance is rewarded at the departmental level. The second part offers a summary of the policies, rules, procedures, laws, regulations, and requirements that affect the student. The third part exhibits faculty expectations on managing situations that may arise at the departmental level or at the practicum agency.

It is the student's responsibility to know the sources of information that will allow him or her to maintain an effective relationship with the campus collaborators. For this reason, they must obtain a copy of the General Catalog, the General Students Regulations, and the Nursing Student Information Handbook, which are all available at the San Germán Campus Website. In addition, the student must keep abreast with the announcements posted on the bulletin boards throughout the campus. The Nursing Student Information Handbook is given with acknowledgment of receipt upon admission or readmission to the Program. It is the student's responsibility to read and maintain it in order to familiarize him/her with the program and its normative aspect. It is an obligation and a responsibility to observe the rules included in this document.

FIRST PART

ACADEMIC INFORMATION

The Nursing Program

The Nursing Program of the Inter American University of Puerto Rico, San Germán Campus, was founded in 1979. It was regarded as the Department of Nursing until 1999. In that year, the San Germán Campus carried out an academic restructuring that resulted in the fusion of similar programs. As a result, the Department of Health Sciences was founded and health related programs were integrated. The Nursing Program became a part of it. In 2015 the Department of Health Sciences was restructured into The School of Nursing and Health Sciences, which incorporates the Nursing Program.

The Nursing Program has continued advancing and consistently seeks to be at the forefront of new knowledge. Since its beginnings, it has undergone five major curriculum revisions. The last revision took place in 2013. This revision accommodates the curriculum to fit the needs that arise as a consequence of changes in the health care systems, social changes and changes in the profession. This revision encompasses the body of knowledge and expectations required of the student.

The Program's Mission and Goals

The Nursing Program has as its mission the education of nurses able to offer competent, sensitive, effective, safe, quality-nursing care to the person, family, and community. The program is geared towards producing graduates who are prepared to perform in accordance to a differentiated practice by the level of education.

- Provide care with autonomy and in interdisciplinary collaboration and sensitivity to ethical-legal and cultural values directed to the achievement of the best results for the client.
- Coordinate care by applying leadership and management skills that lead to the highest quality care with the minimum of cost.
- Assume a commitment as a member of the discipline in harmony with the standards of the practice.

For the development of this professional, diverse and flexible modes of study are offered. This facilitates the mobility from the associate degree nurse level to that of the bachelor degree professional nurse generalist level. The Associate of Applied Sciences Degree in Nursing is designed to develop the competencies that will permit students to:

Knowledge:

1. Demonstrate theoretical and practical knowledge of the nursing discipline when analyzing biopsychosocial and spiritual aspects in the different stages of growth and development.
2. Use knowledge of the nursing process as an instrument for making clinical decisions while offering a safe and quality care.

Skills:

1. Demonstrate up-to-date clinical skills in therapeutic interventions when offering care to the client throughout the continuum of health-illness in structured scenarios.
2. Demonstrate care management, coordination skills and effective collaboration as a member of the interdisciplinary team.
3. Use communication skills, critical thinking and technology to maintain the quality of care offered to the client.

Attitudes:

1. Apply humanistic care in the nursing practice to promote protection, optimization and the preservation of human dignity.
2. Demonstrate responsibility and commitment with their development and that of the profession.

The Bachelors of Sciences in Nursing is designed to develop the competencies that will permit students to:

Knowledge:

1. Demonstrate scientific and Humanistic knowledge integrated into safe and effective nursing care provided to individuals, families and communities.
2. Use knowledge of nursing interventions to prevent disease and to promote, protect, maintain and restore health.
3. Apply knowledge and critical thinking skills to make clinical judgments and to use research findings for the continuous improvement of the nursing practice.

Skills:

1. Use assessment and therapeutic interventions skills when providing nursing care in diverse scenarios to improve the expected health care outcomes.
2. Apply communication, collaboration and critical thinking skills and the use of technology as a provider and coordinator of care and as future member of the profession.
3. Act as leaders and managers of the care they are seeking to provide.

Attitudes:

1. Apply humanistic care in the nursing practice to promote protection, optimization and the preservation of human dignity.

The requirements for the major are offered through the four-year program with an exit option upon completion of the requirements of the first two years. Each year is equivalent to a level in which the courses have been organized and developed according to the level of complexity. In the first two years (level I and II) knowledge and skills are arranged relative to the technical level; in the last two (level III and IV) those corresponding to the professional level are presented. This design articulates both levels of preparation, associate and baccalaureate in nursing, integrating knowledge and skills. Nursing students are exempt from taking the course GEPH 3000--- Well-Being and Quality of Life.

The Nursing Program offers a Bachelor's Degree in Nursing, with an exit or entrance option upon completion of the requirements of the first two years, which correspond to the Associate Degree in Nursing. The San Germán Campus, Nursing Program holds the current and proper accreditation of The Counsel of Superior Education of Puerto Rico. This allows the graduates to work as nurses in Puerto Rico and in any state of the United States of America, upon completion of the licensure examination required of the territory or state in which the services will be offered. Passing this exam is a guarantee from the state to the public that the nurses possess the minimum knowledge required to safely carry out the duties of their profession. To perform their duties, the Program offers the student a body of knowledge, skills, and attitudes that stem from the natural, behavioral, and the discipline's sciences and, is organized from simple to complex in a four-year curriculum sequence. For the enrichment of nursing skills, the program has structured laboratories facilities and maintains affiliation with hospitals and clinical agencies that serve as resources for clinical practices. The student placement in the hospitals, clinical or service agencies depends on the nature and objectives of each course.

The main facilities of the Nursing Program are situated in the School of Nursing Building of the San Germán Campus of the Inter American University of Puerto Rico.

Program Philosophy

The Nursing Program functions under the organizational structure and the governmental design of the Inter American University of Puerto Rico. Aligned with the University's mission and goals, it seeks to form nurses capable of offering competent, sensitive, effective, safe, quality nursing care to the person, families, and communities.

The Program's philosophical foundation stems from the set of beliefs that the faculty possess on the concepts of **person, society, health, nursing and education.**

The **person** is an entity of integrated nature: a complex being, one-of-a-kind, dynamic, with inherent values, rights and dignity. The person's ability to learn from experiences allows him/her to adapt and participate in their own self-care and to regulate their state of optimal functioning and well-being. The person is the object of service that gives meaning to the nursing profession. The client is the person, the family and the community, all who are social entities relating to one another.

Society is a set of organized structures, diverse and dynamic, that transfers to the person the attitudes, beliefs, values and behavioral rules that form its culture through the socialization process. It incorporates all of the settings in which nursing interacts and the historic, political, economic and cultural conditions through which the profession evolves. The person and the society mutually affect each other.

Health is the dynamic and integrated state of well-being, influenced by the internal and external factors of the environment, social structures of support and the cultural diversity in its expression of values and beliefs. It requires constant interaction of adaptation processes such as regulatory mechanisms that promote, maintain and restore the person's well-being. It is part of the person's inherent potential and his or her right as a human being. The person fluctuates in a dynamic equilibrium within a continuum, directed towards reaching optimal functioning and well-being. This integrated functioning is manifested through their human responses. Dysfunction, the consequent decrease in the human development, the self-realization and the ability to achieve a full potential, make the person, the family, and the community susceptible to health situations that demand the intervention of nursing and other health disciplines.

Nursing is an essential, humanistic service based in a body of knowledge and defined goals, where art and science interrelate and are incorporated into the professional practice. Its objective is the diagnosis and treatment of the client's human responses in order to prevent illness and complications, promote, maintain, and restore the state of well-being to the maximum of his potential; or to help the client achieve a death process with dignity. Nursing actions are based on evidence and scientific research, and interdisciplinary collaboration that allow the sharing of decision making, when providing quality care. The nursing care is centered on the person, family or community wherever their setting might be, and through the diversity of roles inherent to the nursing profession. The nursing practice requires independent actions as well as collaboration with other team members with the purpose of reaching the expected health outcomes.

Education is the dynamic, continuous, multidirectional process of social interaction that fosters the person's development. It involves changes in cognitive, emotional, and psychomotor skills that facilitate the development of the person's potential and the realization of their goals at their own pace. This process occurs through the use of innovative trends in the formation of these professionals. The nursing educator establishes the climate, the structure, and the dialogue that facilitates the student's learning process. Learning is an active process that only the learner is able to achieve and it is evidenced by changes in behavior. The faculty believes that these principles apply to the nursing students' formation as well as the clients'.

The faculty believes in learning from a body of knowledge founded on the basic, natural, psychosocial, general education, and the discipline's sciences. It believes in fostering and facilitating the educational mobility of its students in a competitive, global way, within a highly technological society, characterized by accelerated change. In addition, the faculty believes in offering an articulated curriculum that provides vertical mobility and options for entrance and exit, where the design advances from simple to complex with a minimum of repetition of content and experiences. The Program's education is designed to prepare nursing personnel with the required differentiated competencies for associate and bachelor degrees.

The complete program is designed to prepare a Baccalaureate Nurse Generalist and leads to the first level of professional preparation for practice. It prepares nurses to be leaders and health care coordinators/managers capable of independent judgment and responsible, ethical decision making within the nursing discipline, and of contributing to modern society as informed citizens. Upon completion of the requirements of the first two years of study, the student is prepared to offer direct nursing care to the person with common and well defined health problems and guided by the professional nurse. Upon completion of four years of study, the baccalaureate graduate nurse is prepared for professional practice with individuals, families, groups, communities and populations across the life span and across the health continuum environments.

Conceptual Framework

The purpose of the conceptual framework of the Nursing Program of the Inter American University of Puerto Rico is to organize the interaction between students and faculty so that the teaching-learning process can take place. Learning emerges from the selected philosophical concepts that guide the educational process, these concepts selected by the faculty and embodied in the philosophy: Person, Society, Health, Nursing, and Education. Sub concepts are derived from these concepts to organize the curriculum's knowledge and skills.

As a curriculum eclectic in nature, it is based mainly on nursing concepts and theories, natural sciences basic concepts, philosophical- esthetic thought, Christian thought, socio-historical context, and scientific-technological context. These concepts operationalize the established beliefs as paradigms for the Program and the Institution. The **humanistic nursing care and the nursing process** are the concepts that provide range throughout the curriculum. The concepts selected to provide depth in knowledge, attitudes and skills are: **wellness/illness, communication, research, leadership and health care management.**

Horizontal concepts that offer range throughout the curriculum

The **nursing process** is a scientific, dynamic and humanistic instrument that offers direction in the rendering of nursing services. As a practice instrument, it is recognized as a process of diagnostic and therapeutic reasoning that incorporates clinical judgments and reasoning. The process of diagnostic reasoning allows the *analysis* of the client's data derived from the patient's assessment, to determine the state of well-being and to identify health dysfunctions. The nursing diagnosis is taught as a cognitive and intellectual process that develops critical thinking skills.

Therapeutic reasoning allows identification of expected health outcomes, and to plan, implement and evaluate the approaches and interventions based on previous analysis. The expected outcomes seek to continuously improve the level of well-being and health functioning of the person, the prevention of health problems, the health recovery or dignified death. The therapeutic interventions are all those actions within a nursing diagnosis or collaborative problem that are executed for the benefit the client. These may be administered independently or collaboratively.

The student should develop the competencies by implementing the interventions in a sensitive, effective and safe manner. The nursing diagnosis, the identification of expected outcomes, and the therapeutic interventions are the fundamentals for the practice, which are taught through the use of standardized nursing language. The critical nursing interventions are included in the clinical courses, in which content is taught, practiced and evaluated within the particularities of each course. The diagnostic and therapeutic reasoning skills are developed throughout the curriculum in diverse settings and with a diversity of clients.

Humanistic care is the client-centered holistic approach that guides the events, processes, and relationships that seek the protection, expansion, and preservation of human dignity. It integrates the values, attitudes, and personal qualities to the role of health care provider. Likewise, the client's preferences, needs, values and cultural diversity are respected, to guarantee the quality of the nursing care. Thus, the student will develop an ethical behavior that contributes to the preservation of human dignity. The values of the profession are presented as ideals throughout the curriculum in a sequential manner, from its initial appreciation and awareness to the final selection and incorporation into the professional behavior. It is expected that students perform as patient advocates, and assume responsibilities within a legal and ethical framework.

The vertical concepts provide depth in knowledge, attitudes, and skills

The **wellness/illness** continuum is a dynamic, complex process that includes all of the manifestations of the bio-physiological, psychosocial, and spiritual dimensions. The clients fluctuate within the search for a balance for an optimal functioning level that will allow their full potential to develop. This functioning is evident through human responses that build the variety of the client's health determinants.

The typology of functional health patterns represents the integration of human functioning in its different dimensions. Health situations can manifest themselves in one of the client's functional dimensions but it can affect the functionality of the whole person. The expected outcome is to satisfy the client's health needs through interventions regardless of his wellness/illness level.

Communication is the continuous, dynamic, and complex process that facilitates the exchange of information, feelings, ideas and energy that occur in any human experience. Within a complex and ever-changing environment, the nursing personnel needs to develop the abilities to listen, assimilate, interpret, discern, gather and share information. These are obtained through the differentiated practices of the associate and baccalaureate degrees. These abilities are fundamental for the students to acquire knowledge, skills, and attitudes for the purpose of providing safe and effective nursing services. Communication is the tool that unites all of the functions and activities that the nursing personnel execute as part of their roles of care provider, care manager/coordinator, and member of the profession.

Research is the scientific process of inquiring and experimenting, including the systematic collection of data with the purpose of its analysis and interpretation in order to obtain or add new knowledge. Its purpose in nursing is to recommend changes in the system based on the highest level of scientific evidence available. The nursing personnel of the associate degree perform interventions based on evidence, in which effectiveness has been proven. Conversely, the nursing personnel with baccalaureate degree are novice research participants and consumers of research findings.

Leadership and Management are necessary abilities and skills to obtain positive changes in the rendering of nursing care, as advocate for health care and the advancement of the profession. At the individual level, these aid in the determination of a care plan for effective collaboration and coordination in the attainment of interdisciplinary care for the client. At the management level, they facilitate the appropriate management of the resources in order to maintain the quality of care, balance costs and effectiveness, and inspire others to follow.

Leadership is the set of skills and behavior utilized in a conscientious and effective way to achieve a vision, goal, or change. Its effectiveness depends on the personal traits, the skills, and behaviors of the leader, as well as the characteristics of the collaborators and the factors that take place in the particular situation.

Management, for its part, is the ability to achieve goals that benefit the clients' well-being. Its effectiveness depends on the application of skills in: planning, organizing, prioritizing, problem-solving, safe delegation, supervision and education when managing resources such as personnel, environment, budget, time, information and technology. The focus of the curriculum's first two years is teaching and learning management skills in the role of care coordinator for the person. The focus of the last two years of the curriculum is on the development of traits, skills and behaviors of a leader, as well as on the theoretical perspectives for understanding and achieving positive changes in the implementation of direct and indirect care.

Graduate Profiles

It is expected that graduates of the Associate of Applied Sciences in Nursing degree will be able to:

As Provider of Care:

1. Bases practice on the knowledge of basic and psycho-social sciences, general education, nursing theories and nursing practice, in the integral care of the persons in acute or chronic health care structured settings to maintain and restore health or assist in death
2. Utilizes the nursing process as an effective mean for problem solving and decision making in the provision of care to the person, in accordance to his or her level of preparation

Coordinator or Manager of Nursing Services:

3. Participates in team processes to promote changes that positively affect the practice.
4. Utilizes the problem solving process as the foundation for decision making in his or her practice in structured settings, in accordance to his or her level of preparation.

Member of the Profession

5. Assumes responsibility as a member of the profession contributing with her or his own learning and the learning of colleagues for the improvement of the nursing practice.
6. Participates with members of the team in the planning and provision of care to attain expected outcomes in the person
7. Performs in the areas of competency in accordance to standards of the profession when providing nursing care

It is expected that the graduates of the Bachelor of Sciences in Nursing degree will be able to:

As Provider of Care:

1. Bases practice on the knowledge of basic and psycho-social sciences, general education, nursing theories, nursing practice, research in nursing, family and community health and management when offering integral care in a variety of health service settings to prevent illness, promote, maintain and restore health, or assist in death.
2. Utilizes the nursing process as an effective mean for problem solving and decision making in the provision of care to the person, family and community in accordance to his or her level of preparation.

Coordinator or Manager of Nursing Services:

3. Utilizes the administrative process and leadership skills to promote changes that positively affect the practice.
4. Utilizes the problem solving process as the foundation for decision making in the intervention in complex situations in his or her practice in accordance to his or her level of preparation.

Member of the Profession:

5. Assumes responsibility as a member of the profession contributing with her or his own learning and the learning of colleagues for the improvement of the nursing practice.
6. Directs other members of the team in the planning and provision of care at the different levels of prevention to attain expected outcomes in the person, groups, families and communities.
7. Performs in the areas of competency in accordance to standards of the profession when providing nursing care

For the development of this professional, diverse and flexible modalities of study are offered. This facilitates the mobility from the associate degree level to the baccalaureate degree level.

Curriculum Design (Nursing Courses)

NURS 1111 FOUNDATIONS OF NURSING: Introduction to the nursing profession and its historical evolution. Emphasis on the principles of the conceptual framework and the concepts of the Program. Includes the ethical, legal and moral aspects based on the practice standards. Discussion of the nursing process for adult care with common interferences in the functional health patterns that support physical processes. Integration of the principles and basic concepts of growth and development psycho- physiological aspects, considering cultural diversity within a safe environment. Corequisites NURS. 1112, 1130. 4 credits

NURS 1112 PRACTICE OF FUNDAMENTALS OF NURSING: Application of the nursing process in the care of adults with common dysfunctions in the functional health patterns that support physical functioning. Beginning of the development of clinical skills to perform in the areas of competence as care providers. Requires a total of 90 hours of laboratory in diverse scenarios. Corequisite: NURS 1111. 2 credits

NURS 1130 PHARMACOLOGICAL ASPECTS IN NURSING: Discussion of relevant aspects of the study of the pharmacology including the biochemical, physiological, research and legal aspects. Use of the principles and skills of posology. Application of the nursing process in medication administration. Requires 45 hours of lecture and 30 hours of open presental lab. Corequisite: NURS 1111. 3 credits

NURS 1231 FUNDAMENTALS OF ADULT CARE I: Discussion of the acute and chronic dysfunctions of health related to functional health patterns: perception and health management, nutritional-metabolic and elimination. Includes anatomical, physiopathological, microbiological, biochemical and environmental concepts that affect human functioning. Integration of communication, administration, care management, research and the nursing process skills for client care. Prerequisites: NURS 1111, 1112, 1130. Corequisite: NURS 1232. 6 credits

NURS 1232 PRACTICE OF ADULT CARE I: Application of the nursing process in the care of adults with acute and chronic health dysfunctions integrating the skills of communication, care management and research. Emphasis on management of dysfunctions in the functional patterns of health: perception- management, nutritional-metabolic and elimination. Requires a total of 90 hours of clinical practice in diverse scenarios. Prerequisites: NURS 1111, 1112, 1130. Corequisite: NURS 1231. 2 credits

NURS 2141 FUNDAMENTALS OF MATERNAL-NEONATAL CARE: Description of the evolution of maternal-neonatal nursing integrating the principles of the conceptual framework. Discussion of anatomical, biochemical, physiopsychological and pathological changes that affect the integral functioning of the client, before, during and after childbirth, including the normal new born during the early neonatal stage. Use of the nursing process in the study of the appropriate changes in the stages and health dysfunctions. Prerequisite: NURS 1231. Corequisites: NURS 2142, 2233. 3 credits

NURS 2142 PRACTICE IN MATERNAL-NEONATAL CARE: Application of the nursing process using the functional patterns of health in the care of clients during pregnancy, childbirth and post childbirth. The care of the normal new born is included during the early neonatal stage. Requires a total of 60 hours of clinical practice in diverse scenarios. Prerequisites: NURS 1231, 1232. Corequisites: NURS 2141, 2233, 2234. 2 credits

NURS 2233 FUNDAMENTALS OF ADULT CARE II: Discussion of the acute and chronic health dysfunctions related to the functional health patterns: activity-exercise, cognitive-perceptual and sexual reproduction. Includes anatomical, physiopathological, microbiological, biochemical and environmental concepts that affect the adult human functioning. Integration of communication, care management, research, and the nursing process skills and the nursing process in client's care. Prerequisite: NURS 1231. Corequisites: NURS 2141, 2142. 6 credits

NURS 2234 PRACTICE OF ADULT CARE II: Application of the nursing process in the care of adults with acute and chronic health dysfunctions integrating communication, care management, and research concepts. Emphasis on the management of dysfunctions related to functional health patterns: activity-exercise, cognitive-perceptual and sexuality-reproduction. Requires a total of 90 hours of clinical practice in diverse scenarios. Prerequisites: NURS 1231, 1232. Corequisites: NURS 2142, 2233. 2 credits

NURS 2351 FUNDAMENTALS OF PEDIATRIC CARE: Discussion of the essential aspects in client care from the late normal neonatal stages to adolescence. Analysis of the dysfunctions in the functional patterns of health by using the nursing process. Use of the physiopathological and environmental concepts and the conceptual framework of curriculum. Prerequisites: NURS 2141, 2142, 2233. Corequisites: NURS 2352, 2361, 2362, 2970. 3 credits

NURS 2352 PRACTICING PEDIATRIC CARE: Application of the nursing process in client care from the normal neonatal stages to adolescence. Emphasis on the management of dysfunctions affecting the functional health patterns using the concepts of curriculum as a framework. Requires 60 hours of clinical practice in diverse scenarios. Prerequisite: NURS 2234. Corequisites: NURS 2351, 2361, 2362, 2970. 2 credits

NURS 2361 FUNDAMENTALS OF PSYCHOSOCIAL CARE: Discussion of theoretical models, principles and concepts of psychosocial nursing. Description of psychosocial dysfunctions of the adult using the nursing process as a framework. Includes neuroanatomy, neurophysiology, ethical-legal, and research and communication concepts. Prerequisites: NURS 2233, 2141. Corequisites: NURS 2351, 2362 and 2970. 3 credits

NURS 2362 PRACTICE OF PSYCHOSOCIAL CARE: Application of the nursing process, theoretical models, principles and concepts in psychosocial care of the adult. Practice of the skills of therapeutic communication in interventions. Requires a total of 60 hours of clinical practice in diverse scenarios. Prerequisites: NURS 2142, 2234. Corequisites: NURS 2352, 2361, 2970. 2 credits

NURS 2970 TRANSITION SEMINAR: Discussion of essential aspects of student transition to the labor environment. Analysis of the trends and controversies that impact health care. Review of the ethical-legal, technological and scientific implications, professional values and social and economic influences in the exercise of the profession. Development of strategies for taking the board examination. Prerequisites: NURS 2233, 2141. Corequisites: NURS 2351, 2352, 2361, 2362. 1 credit

NURS 3100 DIMENSIONS OF PROFESSIONAL PRACTICE: Analysis of the competence areas: care provider and coordinator, and member of the discipline from the professional dimension. Includes the concepts: humanistic care, ethical-legal responsibility and the nursing process. Emphasis on health education, leadership and management that facilitate dealing with changes in the health care systems and the nursing practice. Corequisites: NURS 3120 and 3115, or have an Associate Degree in Nursing. 3 credits

NURS 3115 INTRODUCTION TO THE NURSING RESEARCH PROCESS: Discussion of the research process and the ethical legal considerations. Application and evaluation of the practice based on the evidence for health problem solving. Research critique for the development of the best practices in the profession. Corequisites: NURS 3100, 3120. 3 credits

NURS 3120 HEALTH ASSESSMENT: Application of knowledge and skills for a comprehensive health assessment of the client throughout the life cycle. Emphasis on the compilation and organization of data by means of the physical examination and diagnostic reasoning. Requires 30 hours of lecture and 60 hours of closed presential lab. Corequisites: NURS 3100, 3115 4 credits

NURS 3140 INTERVENTION IN PSYCHOSOCIAL TRANSITIONS: Analysis of the trends, theories and concepts that influence the practice of the psychosocial nursing professional. Review of professional nursing interventions that apply to the psychosocial care of individuals, families, groups and vulnerable populations or with persons with dysfunctions in functional health patterns. Integration of communication, ethical-legal, moral spiritual principles and research findings. Corequisites: NURS 3190, 4911. 2 credits

NURS 3190 PROFESSIONAL INTERVENTION DURING THE LIFE CYCLE: Analysis of the nursing process as a tool of the professional with emphasis on therapeutic and diagnostic reasoning for decision-making in professional interventions. Review of interventions at the prevention levels when managing human responses in the most common health-illness situations. Includes the ethical-legal concepts and research findings. Requires 30 hours of pediatric content and 30 hours of adult content. Prerequisites: NURS 3100, 3115, 3120. Corequisites: NURS 3140, 4911. 4 credits

NURS 4180 NURSING CARE OF FAMILY AND COMMUNITY: Analysis of selected theories and concepts that facilitate the study of the family as an integral part of the client community. Includes the review of the principles and concepts of epidemiology, biostatistics and demography of public health. Discussion of the nursing process for family and community care with emphasis on the promotion of health and well-being. Ethical-legal, humanist and research concepts. Study of the nursing professional's roles in a culturally diverse community. Prerequisites: NURS 3140, 3190. Corequisite NURS 4914. 4 credits

NURS 4911 PRACTICE IN PROFESSIONAL INTERVENTIONS ACROSS THE LIFE CYCLE: Application of the nursing process with emphasis on therapeutic and diagnosis reasoning for decision making in professional interventions. Emphasis on the levels of prevention for the management of human responses in the most common chronic dysfunctions. Integrated application of the principles and concepts of communication, health education, ethical-legal, research, leadership and management. Requires a total of 45 hours of clinical practice with the pediatric client and 45 hours with the adult client in diverse scenarios. Prerequisites: NURS 3100, 3115, 3120. Corequisites: NURS 3140 and 3190. 3 credits

NURS 4914 PRACTICE IN NURSING CARE TO THE FAMILY AND COMMUNITY: Application of the nursing process in the humanist care of family and groups as integrated part of the community as client. Integration of concepts and theories that serve as base of the nursing practice with the family and community. Use of public health concepts, epidemiology, biostatistics, demography and community nursing in the intervention with family and community. Demonstration of planning, coordination, leadership and educational skills in the implementation of intervention strategies. Application of ethical-legal principles and research findings in undertaking the roles of the nursing profession in promoting health and well-being. Requires 120 hours of clinical practice in diverse scenarios. Prerequisite: NURS 4911. Corequisite: NURS 4180. 4 credits

NURS 4980 INTEGRATED WORKSHOP: Integration of knowledge, skills and attitudes in the selection of professional intervention strategies for the processes of problem solving and decision making practice in simulated situations in different scenarios. Use of the scenario categories for effective and safe care, maintenance and promotion of health, and of psychosocial and physiological integration as a frame of reference in intervention with clients. Requires 30 hours of seminar and 90 hours of clinical practice in diverse scenarios. Prerequisite: NURS 4914, in case the student is a candidate for graduation in the current academic term, this course may be offered concurrently with NURS 4180 and 4914. 4 credits.

Program Requirements: Admission, Transfer and Relocation, Academic Progress and Graduation

Admission Requirements

1. Comply with the admissions requirements established in the General Catalog.
2. To be a candidate for admission to the Associate and Bachelor's Program in Nursing, candidates must have a minimum grade point index 2.50 from their high school or place of origin.
3. To be a candidate for admission to the third level (third year courses) of the Bachelor of Science Degree in Nursing, students must: a. Have satisfactorily completed the requirements of the first two years corresponding to the Associate Degree in Nursing or, b. Present evidence of holding an Associate Degree in Nursing from an accredited and recognized institution of higher education. Candidates having an Associate Degree must complete any general education requirement established by the Institution for awarding the degree and c. Present at the time of admission to the Program evidence of any permanent license they possess.

Requirements of Clinical Practice

To be admitted to a practice agency the following is required:

1. A current certificate of no criminal record issued by the Police of Puerto Rico.
2. A health certificate valid for one year issued by the Health Department.
3. Evidence of vaccination against Hepatitis B.
4. Evidence of vaccination against chickenpox or chickenpox titer tests.

Some agencies and courses have additional requirements. Students are responsible for complying with any other requirement imposed by the practice agency. Among these are: An updated certificate of CPR, a negative dope test, a nose and throat culture and a negative certificate of sexual offender.

Transfer Requirements:

1. Comply with the admissions requirements for transfer students established in the General Catalog.
2. Admission of transfer students to the Program or to take courses of the major with combined registration requires the previous authorization of both Program directors.

Academic Progress Requirements of the Nursing Program:

1. Comply with all Satisfactory Progress Norms established in the General Catalog.
2. Pass all courses in Nursing and the course GEMA 1000 (Quantitative Reasoning) with a minimum grade of C.
3. Students who do not pass a major course with a minimum grade of C in their third intent will be dropped from the Program.

Graduation Requirements

1. For the Associate Degree in Nursing students are required to complete 50% of the major credits in the campus from which they expect to receive the degree. This also applies to the Bachelor's Degree
2. Students must take course NURS 4980 in the campus where they expect to graduate, except in special situations with the previous authorization of the Director of the Program.
3. All students who are candidates for graduation in the Associate or Bachelor's nursing program must graduate with a minimum grade point average of 2.50.
4. Students, upon completing the requirements of the first two years of study, have the option to request certification of the Associate Degree in Nursing in order to apply for the board examination.

Rules for Satisfactory Academic Progress:

The Rules for Satisfactory Academic Progress at the Undergraduate level of the Programs (Normative Document A-0416-055, effective April 28, 2016) in section VI, page 6, <http://documentos.inter.edu/docs/index.php?article=231&suggest=1> , Spanish version (English version not available yet) establishes among others, the satisfactory academic progress component. The following states some important aspects:

“VI. The Satisfactory Academic Progress Component”

6.1 Qualitative Component

6.1.1 The University will apply the satisfactory academic progress qualitative component to the students. In order to do so, it will be determined if the student has achieved the required grade point average which increases progressively in accordance to the approved credit percentage. The grade point average that the student pursuing an associate or a bachelor degree should achieve is itemized in tables. (See pages #6-8 of the document in the following link:

<http://documentos.inter.edu/docs/index.php?article=231&suggest=1>)

For other documents in the English versions:

<http://documentos.inter.edu/docs/index.php?search=+english>

(The link contains catalogs, documents, regulations, and rules that are current in the Institution)

The student should achieve a progressive grade point average in accordance to the percentage (%) of approved credits per degree, as established in the Satisfactory Academic Progress at the Undergraduate level of the Programs (Normative Document A-0416-055, April, 2016, pages 6-7)

6.2 Quantitative Component

6.2.1 The student must:

a. Pass at the time of evaluation, 50%, 60% or 66.67% of the total amount of credits undergone in the program of study, in accordance to the interval of the level of study. View the table at page 8, at the following link: <http://documentos.inter.edu/docs/index.php?article=231&suggest=1> ,

b. Complete the requirements of the program of study in no more than 150% of the time (measured in credits).

The following is a presentation of the curricular plan with the graduation requirements for the Associate and Bachelor degrees in Nursing.

Curricular Plan

The goal of the course sequence is to help student development. The faculty has organized the content in logical order, from simple to complex. The student acquires the knowledge and skills needed to progress in depth into subsequent content. To achieve a body of organized knowledge, the student will follow the curricular sequence. **(Annex 1)**

Student Support Service

Academic Counseling

Academic counseling offers the students the opportunity of advisement in carrying out the curriculum the way that it is designed, in order to complete their academic goals within the scheduled time frame. In addition, it allows the students to identify and attend to any situation that would pose a risk to reaching their goals. The students are responsible for contacting and scheduling an appointment with their academic advisor upon learning which professor they have been assigned to. This will help maintain their academic file in order and to help plan the academic advisement activities.

Nursing Students Association (AEE, in Spanish)

The AEE is part of the students organizations appropriately accredited by the Dean of Student Affairs of the San Germán Campus. Its purpose is to develop leaders, encourage student participation in Program activities and offer the opportunity for exchange between organizations of the University Institution and others, in or outside of Puerto Rico. To become a member, the student must be accepted into the Nursing Program; apply for admission into the Association; and pay the membership fee.

Clinical Laboratory Skills Technician

The Nursing Program has a full-time laboratory technician that facilitates practical experiences, particularly psychomotor skills when required by a course, requested by the student or referred by a faculty member. The clinical laboratory skills technician normally offers services from Monday-Friday, 7:30-12:00 pm and 1:00- 4:30 pm. The courses in which practical skills are required during extended hours, the student is responsible for selecting the schedule in which their practice, assisted by the laboratory technician, will take place. In addition, the laboratory technician often provides the students with bibliographic references, audiovisual resources, oversees utilization of the computer laboratory for course work and facilitates equipment loans, in coordination with the course faculty.

Practice within a Controlled Laboratory Setting

Students, who need an individualized practice in a particular skill, may do so by having previously coordinated and received approval from the laboratory technician. The individual practice will be supervised by the technician, faculty or authorized person as applicable. The clinical laboratory skills technician facilitates the available schedule for practice, use of laboratory space, computers, equipment and materials. In some instances equipment may be loaned to be used outside of the laboratory. The practice sessions, as well as the materials and equipment to be used, are meant to support the course objectives.

Technology Services

The San Germán Campus has a modern Information and Telecommunications Center (CIT, in Spanish). This center provides the students with technical assistance in the use of technology in addition to other support services to the academy such as: Email account with the Windows@Live.edu platform

- E-mail account
- Access to the wireless network (WIFI) on campus
- Support with the "Blackboard" platform and guarded online testing: the nursing courses are offered with the supported "Blackboard" platform, so that the student may access the course resources and strategies through the network.
- Access to the Printer and Photocopiers in the CIT and the Campus library (CAI) - Centro de Acceso a Información, in Spanish
- Access to the CIT-101 computers, and the CAI and cyber centers
- Guidance for searching in the Auto service Banner System (**web.inter.edu**)
- Guidance for enrolling through the Auto service Banner (**web.inter.edu**)
- "Blackboard" user guide
- Technical support in the "Help Desk" CIT-101 area

Coordinator of Agencies for Clinical Practices

The clinical coordinator services fulfill the purpose of facilitating the nursing student's clinical practice laboratories in the collaborating agencies. Part of the role of this collaborator, who is a member of the nursing program faculty, is to function as a link between the course, faculty, students and the agencies' requirements. To fulfill this obligation, the clinical practice agencies coordinator is responsible for compiling, filing, and submitting to the clinical agencies the corresponding evidences, such as: health certificate, negative criminal record certification, Hepatitis B vaccines, CPR certification, and evidence of health coverage. Additional documents may be required by the collaborating agency, such as: a negative drug test (Doping), a nose and throat cultures, common Influenza vaccine, or any other requirement they may deem necessary. The clinical practice agency coordinator provides follow-up, through the course faculty, ensuring that the student fulfills the established requirements before they begin their clinical laboratories. It is also the coordinator's responsibility to manage the general evaluations of the collaborating agencies by the students and the faculty.

Participation in Extracurricular Activities

The integral development of the nursing students is part of our educational commitment; therefore student participation in activities that support their professional education is encouraged. The nursing student is invited and encouraged to participate in activities such as: assemblies, conferences, and professional conventions, among others. The institution, through the office of the Dean of Student Affairs, the student organizations, and other available financial resources, may sponsor student participation in extracurricular activities, especially when participation is relevant to their academic preparation, their profession and personal development.

Distinctions/ Awards

The University has diverse mechanisms for recognizing the student's outstanding work, such as Chancellors and Deans awards. In addition, to those established in the General Catalog, there are others awarded by the Nursing Program:

1. **The Celia Guzmán Award**

Through this award, the Nursing Program pays tribute to a distinguished Puerto Rican nursing educator and researcher, Ms. Celia Guzmán. The award aims to recognize the most outstanding graduate of the Bachelor's Degree Nursing Program that meets requirements such as academic grade point average, clinical execution, and outstanding leadership and activities participation, as established in the criteria for granting the award.

2. Certificates of recognition for participation in diverse services and activities are also awarded.

SECOND PART

POLICIES, RULES AND PROCEDURES, LAWS, REGULATIONS AND REQUIREMENTS

The Nursing Program embraces the University's mission against discrimination as stated in the General Student Regulations, and to all of the policies, rules, procedures, regulations, and laws that affect the departmental community. The following link contains the catalog, documents, and regulations and rules that are current in the Institution in their English versions.

<http://documentos.inter.edu/docs/index.php?search=+english>

Emphasis on:

Family Educational Rights and Privacy Act. 1974 – The Buckley Amendment oversees the management of the student's academic record, guarded by the University. In compliance with this Act, the student's academic record and academic progress will be maintained confidential.

Intellectual Property Policy- Students are instructed on the enforcement of the Normative Document G-0502-003, Intellectual Property Policy of the Inter American University of Puerto Rico, and the Chapter V, Article 1, section B.2 of the General Student Regulations, which highlights academic infringement by lack of honor, fraud, plagiarism, and any other inappropriate or unethical behavior, pertaining to academic labor or any other action towards that end.

Disabled Student Rights – In compliance with Section 504 of the Rehabilitation Act, the ADA (American with Disabilities Act) and the Circular Letter G-145-92, the Inter American University of Puerto Rico will, to the best of its ability, provide reasonable accommodations in order for the disabled student to be able to participate in academic life with equal conditions as the student without disability. Disabled students must inform the professor of each course about their special needs or reasonable accommodation for the course during the first week of class, and visit the Office of Service Coordination for Students with Disabilities (OCSEI) as soon as possible.

HIPAA, 1996 (Health Insurance Portability and Accountability Act of 1996) - Through the clause stated in the affiliation contracts with health institutions, it is established that the University agrees that its personnel, as well as its students, will observe the federal statutes of the Act. The student commits to guard the privacy of all client health information during their clinical practice.

Smoking Limit Regulation- The purpose of the Regulation is to limit smoking; define and establish smoking and non-smoking areas; and to establish sanctions for infringing the rules. In this manner, people's rights and health are protected.

Use and Abuse of Drugs and Alcoholic Beverages Regulation- This Regulation prohibit the fabrication, distribution, possession, or illicit use of drugs, controlled substances, and alcoholic beverages on Campus property.

Policy Against Sexual Harassment at the Workplace and in the Academy – Its purpose is to establish the conceptual base and the procedures for complaints about sexual harassment in the workplace or within the academy. Sexual harassment in the workplace or in the academy refers to any type of undesired sexual encounter, requests for sexual favors, and any other verbal or physical conduct that is sexual in nature, when:

- a. Submission to said conduct becomes implicit or explicit in a term or condition to be accepted into the University as a student.
- b. The submission or rejection of said conduct on behalf of the student becomes the base for the evaluation of academic achievement and qualification of the student.
- c. The conduct has the effect or has the purpose to unreasonably interfere with the student's academic work or when it creates an intimidating, hostile or offensive study environment for the student.

Institutional Security Policy, In accordance with the institutional security policy, the School of Nursing and Health Sciences supports all efforts to protect life, safeguard property and provide secure areas to the university community and visitors. The institution has a university guard service, 24 hours a day, and seven days a week. The students must comply with the security measures, personal and property protection, recommended by the administration. In the event of emergency, the students can contact the service from any of the Campus telephones by dialing 2-9. This will allow communication with the university guard situated at gate #1. This person will provide the necessary assistance.

Attendance Policy, The General Catalog requires all students in classroom-based courses to attend classes. Each professor will establish in the syllabus the attendance requirements needed for completing the particular content of the subject. Attendance to the controlled and clinical laboratories is essential to pass the nursing program courses. Should the student be absent, and not be able to make up lost course content, the faculty of the course will evaluate the situation by its merits in order to determine if a class replacement, an incomplete or a failure applies.

Health Insurance: All students must provide evidence of health insurance coverage.

Course Requirements: The student will fulfill the course requirements as established in the syllabus (General Student Regulations, Article 2).

Request for an Incomplete: The student that is not able to fulfill the course requirements, for justifiable reasons, may request an incomplete if they have passed 2/3 of the course at the time of request. It is the student's responsibility to remove it the incomplete grade as established in the General Catalog.

Conduct: The students will exhibit respectful and professional conduct in their actions as in their expressions to their peers, professors, and/or visitors. The student is responsible for the care and maintenance of the physical facilities while making use of them. In the event of using facilities outside of the class schedule or using those considered to be controlled areas, they will do so with authorization from the authorized personnel or their representatives. The student is responsible for properly using the established communication channels when in need of assistance. At the Nursing Program level, these channels follow the prescribed order: Course professor, “Master Teacher” or lead professor of the course, School of Nursing Director, Dean of Academic Affairs, Dean of Student Affairs, Chancellor, Student Affairs Vice-Chairman, and if need be, the University President.

Rules for using the Clinical Skills Laboratory:

1. They will be used exclusively for skill development.
2. The laboratory's physical facilities, equipment and materials may be used by previous request from the student that seeks to improve their execution or, that was referred by their professor, but always under the instructor's or the authorized person's supervision.
3. Students that have been referred must request their appointment in the same week of referral.
4. The appointments for independent group laboratories will be limited to a minimum of five students per group.
5. The student or students that cannot use the facilities on the appointed day must notify the Clinical Skills Laboratory Technician beforehand, and proceed to schedule a new appointment.
6. Every student that attends independent tutorial or referral laboratories will sign the attendance record located at the Clinical Skills Laboratory Technician's office.
7. The students must only handle the materials, equipment, or models that are in the laboratory area being used and that are related to the skill that is being practiced.
8. Upon finalizing the laboratory, the students must assist the instructor and/or authorized personnel in returning the area clean and organized, and to properly dispose of the used materials and equipment.
9. For requests to use the equipment or materials outside of the Nursing Program, the student must present the pertinent document with course Instructor's that requires its use signature. Requests submitted without this signature will not be processed.
10. The request to use the equipment, materials, and laboratory must be submitted to the Clinical Skills Laboratory Technician one week prior to the date it will be used.
11. The student will return ALL borrowed materials or equipment and at the time of devolution, notify if anything is defective, broken, has been lost, or has the batteries still inside. In case of negligence, replacement of cost of the equipment may be required.
12. The student will not be allowed to eat, use cosmetics, chat or do any other activity that affects or disrupts the skills development taking place in the laboratory area.
13. Every student must have their corresponding worksheets with them for the procedures or skills practice.

The Student's Ethical and Moral Responsibility

The student will demonstrate the highest values of personal, professional and academic integrity. He/she will comply with the principles, rules, legal statutes, ethics code, and standards of the Nursing practice. The students will exercise their roles in a prudent, responsible, and safe manner, in accordance with the established requirements of the course. He/she will be aware of their decisions and actions, reducing to a minimum, the risk of injury to themselves and others. Plagiarism, lack of honor, manipulation or falsification of data will be subject to disciplinary sanctions as established in the General Student Regulations. The following link contains the catalog, documents, regulations and rules current in the Institution. <http://documentos.inter.edu/docs/index.php?search+=english>

Rules of Access and Use of Clinical Practice Agencies

Students and professors are spokespersons for the Inter American University of Puerto Rico and the San Germán Campus Nursing Program, their Philosophies, Missions and Goals and of the Nursing profession anywhere they find themselves. Thus, they are bound to conduct themselves in accordance to such philosophies, mission and goals. They are also expected to respect the philosophy, mission and goals of the institutions they visit. Infringement of the rules of the institutions where their practice takes place will result in losing the clinical practice privileges.

The following is required in order to be accepted into a clinical practice agency:

1. Submit a negative criminal record certificate, issued by the Police Department of Puerto Rico, effective for six months.
2. A valid health certificate, effective for one year, issued by the Health Department of Puerto Rico.
3. Evidence of completion of the Hepatitis B vaccination series.
4. Evidence of valid CPR certificate.
5. Evidence of health insurance coverage.
6. Students are responsible for complying with any other requirement requested by the clinical practice collaborating agency. Among them: nose and throat cultures, a negative drug (dope) test, the Influenza vaccine, evidence of respirator fit test, or others as requested.

The professor assigned to the clinical laboratory is responsible for the education and evaluation process. Every student is responsible for their actions, and in the event of negligence or malpractice, they may be processed in accordance to the law.

The Nursing Program's faculty maintains a close relationship with the clinical practices collaborating agencies that support the student's education and preparation. The faculty oversees that the students are in full compliance of the rules that apply to the clinical area. The student assumes the responsibility of fully complying with the following rules:

1. The students will arrive to the clinical areas, by their own transportation means, on the agreed upon day and time.
2. The student will comply with the established dress code: **jewelry is not accepted** with the exception of a wedding band (without gems or stones) and watch. Some collaborating clinical agencies permit small earrings for females only. Religious symbols or small personal charms may be worn on small link chain on the **inside** of the uniform. **Hair** should be kept short or tied-back, **beard and mustache** should be trimmed. If **makeup** is worn, soft colors should be used without excesses. Comfortable loose-fitting **uniform**, clean, pressed, with non-slip **shoes**, white, of water-resistant material with closed toe area and low heels with white professional socks, should be worn.
3. Per the Puerto Rico's Health Department's (PRHD) rule, artificial or acrylic **nails** are not permitted. The PRHD also establishes that Natural nails must be kept short, no more than 1/8" above the fingertips, Clean, filed, bare, without nail polish.
4. Only uniforms authorized by the Nursing Program are permitted. An example of the required female and male uniform model will be shown at the orientation for new students. At the collaborating agency, the student will wear a blue or white laboratory coat over their uniform, in accordance with the established policy for asepsis. For the Maternity Ward, Surgical Room, NICU or other established special areas, the student will change into green scrubs, in compliance with the agency's rules.
5. The use of the uniform is prohibited in public areas.
6. The student will comply with the dress code while wearing the uniform, notwithstanding of location.
7. The student will visibly carry their identification card provided by the University and any other identification required or provided by the collaborating agency.
8. The student will own and bring with them the following equipment to every laboratory: stethoscope, sphygmomanometer, medical scissors, diagnostic penlight, black and red pen, calculator, #2 pencil, and small notebook.

9. Access to the clinical area will be granted in accordance to the rules established in the course syllabus. Any student who does not comply with the credentials and documents required by the collaborating agency; or any student who is not prepared with the assignments for the laboratory; any student who does not carry the necessary equipment, or is late, will be denied access. These will count as absences and will be considered as such for class attendance policy.
10. Any student, that the faculty deems, is violating the rules for safe practice, who is putting himself, the patient and/or the equipment in imminent danger, will be suspended from the clinical practice. The student that incurs in such conduct will risk the fulfillment of the course objectives and the passing of the course.
11. The student is responsible for informing to the faculty of any situation that can compromise safety or that can alter a healthy coexistence.

THIRD PART

SPECIAL SITUATIONS

Incidents/ Accidents

An incident is considered to be any situation that occurs and that can have repercussions for the patient, the student, the collaborating agency or the University. An accident is an unplanned event that results in physical harm with immediate or later repercussions. In any of these cases, the established procedure will be followed, considering the magnitude of the situation and the contract clauses settled upon between the collaborating agency and the University.

In the event of an **incident/accident during the course of the class or controlled laboratory experience:** the professor will carry out the applicable corrective measures and will manage the situation with the Program Director or delegate. Should it be resolved at this level, the professor will keep a record, which will be presented following the rules for provision of course documents that appears in the General Catalog. Should it not be resolved at this level, the case will be handled according to the established policies.

a. Health Situations: In case of an emergency, it will be handled through the Director of the First Aid Office, with the support of the Nursing School's collaborators. Cases that are of mental or emotional character will be referred to the corresponding services with the student's or family's (in case of a minor) previous authorization. The services may be: the First Aid Office, the Psychological Services Clinic, the Orientation Center, or hospitalization and treatment centers. These cases will be kept strictly confidential.

b. Incidents/ accidents during the Clinical Laboratories: The professor will carry out the applicable corrective measures and will manage the situation with the area supervisor or delegate. The professor will keep a record, which will be presented following the rules for provision of course documents that appears in the General Catalog. Should it not be resolved at this level, the case will be handled accordingly.

- 1) Health Situations: Will be handled in accordance with the protocol established by the collaborating agency and that stipulated in the contract clauses settled between the agency and the University.
- 2) The professor will present a written report to the Program Director. The students needing follow-up will be referred to the Director of the First Aid Office, in writing, through the pertinent documents.

c. Students under the age of 21: Every student under the age of 21 must present an authorization in order to receive emergency medical attention in a hospital. In it, their father, mother or legal guardian will authorize the health agency to offer medical assistance. A copy of the authorization letter is included in Annex #2.

d. Disciplinary Situations: Will be documented objectively and channeled accordingly. The Department Director, will forward the situation in writing to the Dean of Student Affairs in compliance with the Student Regulations provisions. In case of immediate danger, the Department Director will use the corresponding support (First Aid Director, University Security, or Dean of Student Affairs), to ensure the University's community and the student's safety and well-being.

Complaints

All the students have the right to elucidate situations that affect their academic achievement including their performance or the environment in which the learning-teaching process takes place. In the search for solutions, the student will follow the authority channels designated by the institution until they feel their claim has been dealt with justly. The following procedure is recommended:

- a. The **complainant** clarifies the situation with the **person or persons subjects of the complaint** within a 48-hour minimum timeframe. It is recommended that the complainants present their situation, their sentiment on it, recognize, if any, their contribution to the situation, and collaborate in the search for solutions at that first level.
- b. Should the complainant not be satisfied with the outcome, or should the situation repeat itself, the complainant should present the case before the Nursing Program Director on or before the fifth day of the situation having occurred.
- c. To assist in the situation's resolution the Program Director may name a Committee of three collaborators from the Department to investigate the situation and present their recommendations. Complainant and subjects of the complaint will have the right to present an equal number of witnesses that does not exceed three per each party.

The Program Director will study the report and will implement the applicable recommendations. If deemed necessary, the Director will elevate the case to the corresponding authorities.
